

Issue recurring - task #38

Recurring error causes all recurrences doesn't be generated

2023-01-16 16:39 - lupa18

Status:	new
Priority:	bug
Assignee:	cryptogopher
Category:	
Target version:	1.7
Redmine version:	unspecified

Description

Hi ! One issue was moved from a proyect to another and then a error occurs:

```
- creating recurrence at {:start=>Thu, 02 Feb 2023, :due=>Thu, 02 Feb 2023}
...exception raised. Check output for errors. Either there is bug you may want to report or your d
b is corrupted.
```

That prevents the other tasks from being generated :(

Also should be interesting if this happens, the task could be assigned to default account or similar.

History

Hi,

Thanks for reporting. I will look into it in few days. I had a laptop failure at the end of last year and only now getting up to speed :|

Having exception means, that something very wrong is happening in the code - some unexpected, unusual condition that has not been accounted for. Continuing generation of tasks would risk data integrity. That's why it's justified to stop once something like this happens.

Also should be interesting if this happens, the task could be assigned to default account or similar.

I don't understand the context for this statement. Could you elaborate?

Also: can you please provide /admin/info content of your Redmine installation?

I don't understand the context for this statement. Could you elaborate?

Sorry, I think I miss some important part of the log (I'm attaching complete log for this issue). It seems something related with permissions when you

move a task to another project and next one will be generated from that moved task.

That's why I think that if the task can't be generated by some user, maybe can be generated by admin user.

Also: can you please provide /admin/info content of your Redmine installation?

Info attached.

thanks again,
